

C++ in Quantitative Finance

#11

A Terminator class

Paweł Sakowski

Faculty of Economic Sciences

Exercises

1. We're back to non-path dependent options. Project13 implements a Terminator class. It works, but inefficiently. Correct it accordingly.
2. Implement a Terminator class for path-dependent options. Use Project12 as a starting point. You might be interested in creating another inheriting class for the modified version of ExoticBSEngine.

Thank you!
